[Thermal Transfer Printer]
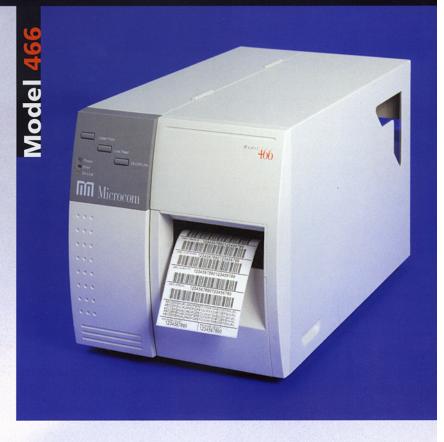

Model 466

VALUE-PRICED PRINTER

You can expect high performance and reliability from the Model 466. It has a durable metal case with an industrial strength mechanism that lets you print labels, tickets and tags shift after shift, day after day. The heavy duty industrial packaging allows it to be used in the toughest manufacturing environments, as well as most retail, commercial, clinical or business applications.

PRINT SPEED

The Model 466 will increase productivity by printing high quality labels or tags at speeds up to 8" per second with a resolution of 8 dots/mm. To complement the print speed, the Model 466 will accommodate an 8" O.D. label supply roll and a 600 meter ribbon supply roll. Throughput print speed is further enhanced by the use of dual microprocessors.

MEMORY

The 466 comes standard with 512K ROM for code and font storage and 512K of battery backed RAM for label storage and downloadable graphics. This battery feature prevents valuable information from being lost if the printer's power is accidentally interrupted. Up to 2M of additional RAM is available for custom printing configurations.

OPTIONS

If high resolution printing is required, the 300dpi intelligent printhead option is ideal. An internal rewind feature combines with our demand self peel, dispenses each label peeled from the liner while storing a full roll of label backing paper inside the printer. A high-performance rotary cutter is available and cuts full-width labels and tags. Optional communication interfaces include Centronics® parallel and Twinax/Coax. All this makes the Microcom Corporation Model 466 the ideal choice in value-priced printers.
